

K. VENKATA DHANUSH

LINUX SYSTEM ADMINISTRATOR | PYTHON | SQL

Hyderabad, India | +91 9392856298 | Kanasanidhanush7@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Linux System Administration fresher with hands-on experience in Ubuntu and RHEL environments through practical lab projects. Skilled in user and group management, file permissions, ACL, LVM, SSH, NFS, Samba, system services, processes, and log monitoring. Familiar with VirtualBox and basic Python scripting for automation and troubleshooting. Strong interest in Linux administration, system support, and infrastructure operations...

TECHNICAL SKILLS

- Linux:** Ubuntu, RHEL, Linux Administration, Users & Groups, File Permissions, ACL, LVM, SSH, Systemd/Systemctl, Process Management, Log Monitoring
- Python:** Python Fundamentals, OOP, File Handling, Basic Scripting & Automation
- Networking & Services:** Basic Networking, NFS, Samba, DNS Basics
- Virtualization & Tools:** VirtualBox, Git, GitHub
- Python Libraries:** os, sys, re, datetime, random
- Tools & Version Control:** Git, GitHub, Command Line, VirtualBox, MySQL Workbench
- Operating Systems:** Windows, Ubuntu, RHEL

WORK EXPERIENCE

Data Annotation Associate — Tao Digital Solutions

September 2024 – September 2025

- Performed image labeling, audio transcription, and video labeling to build high-quality datasets for AI/ML model training.
- Followed project-specific annotation guidelines and quality standards to ensure consistent, accurate data labeling
- Performed quality checks and validation on annotated data to maintain accuracy and consistency across datasets.
- Completed assigned annotation tasks within strict deadlines while maintaining high throughput and data quality.

PROJECTS

LINUX ADMINISTRATION HOMELAB — Ubuntu Linux, VirtualBox, OpenSSH, NFS, Samba, LVM, Git & GitHub

github.com/kanasanidhanush7-dev/Linux-Administration-Homelab

- Built a hands-on Linux administration lab using Ubuntu in VirtualBox to simulate real-world system administration tasks.
- Managed users, groups, file permissions, and ACLs for controlled access to system resources.
- Configured SSH, LVM, NFS, and Samba for remote access, storage management, and file sharing.
- Performed basic system monitoring and troubleshooting and documented commands and configurations.

Linux Security Log Analyzer — Python, Linux, Regex, CLI

github.com/kanasanidhanush7-dev/Linux-Security-Log-Analyzer

- Built a Python CLI tool that parses Linux SSH authentication logs to automatically detect failed login attempts, suspicious IP addresses, and security events.
- Used regular expressions and modular Python functions to extract IP addresses, usernames, and timestamps from raw auth logs.
- Implemented threshold-based suspicious-IP scoring (5+ failed attempts) to flag likely brute-force activity.
- Generated structured, readable security reports summarizing failed attempts, IP attack frequency, and flagged threats.

EDUCATION

M.Sc. Computer Science 2026

Vikas PG College

B.Sc. Computer Science 2024

Vikas Degree College | CGPA: 7.0 / 10
